Ocean, NJ | web3dev.work@gmail.com | cell: (303)-923-0856 | [web3resume.netlify.app](https://web3resume.netlify.app)

Full Stack Software Engineer with previous experience

Related to Finance, Machine Learning, and Blockchain Technologies.

## Skills

### Core Stack

- JavaScript / React
- Python
- HTML/CSS
- Solidity
- NodeJS
- AWS tools (EC2, S3)

### Passions

- Web App Prototyping
- Data Visualization
- Machine Learning
- Blockchain Programming
- HTML5 Game Dev
- Financial Markets, Derivatives

### Industry Knowledge

- GIT, APIs (restful services)
- Scripting and Automation
- Training and Testing AI models
- Decentralized Web3 Applications
- Smart Contract Deployment
- Cloud Database Management

## Work Experience

- **Quiddit.AI** (June 2021 – *WdzyS нлнр*): *9EÜSyaİÜS öZŘè ZT äZTÜÖ I-ÜS LJWZöSÖÜäS* QuidditAI, an end-to-end webpage generator with functional real time image generation. Gamegear, a web3 emulator with AI trading tools (trading bots, scanner tools) + social features (chat, friendslist, retro games). Tied to cryptocurrency that reached \$11.2 million USD market capitalization. SolBuddy, the first Flash Player game ever minted as an NFT, on the Solana blockchain. ETHarcade, collection of browser games made available in the browser with javascript, minted on Ethereum. BeetleGame, fully functional card game with custom image assets, runs in the browser. (30,000+ lines of code) MichiProtocol, won 2nd place at ETH Denver 2024, 500+ attendee hackathon.
- **Financial Service Consultant, TIAA (April 2019 – June 2021)**: Provided industry leading service over the phone for our clients related to their investments, **retirement plans, annuities, and life insurance products**. Ensured clients had a comprehensive individually tailored plan for their financial future.  
**Licenses:** *Securities Industry Essentials (SIE), Series 6, Series 63, Life Insurance - all states.*
- **Data Science Teaching Assistant, Thinkful (November 2018 – March 2020)**: Taught new programmers practical **data science** with **python**, covered machine learning libraries such as TensorFlow, concepts such as *Deep Learning, Natural Language Processing, and Time Series Analysis*. Helped formulate and deliver lesson plans

## Personal Projects

### ❖ Quiddit.AI

An LLM wrapper using deepseek v3 and opensource image models to generate entire webpages, art, games, and animations utilizing the user's conversation as context. No code creative solution.

### ❖ Gamegear

A browser based retro-arcade emulator that was paired with it's own crypto currency and AI powered trading tools. Top 300 coin on the Solana blockchain briefly. Complete with social features such as chats, friendslist, and online player statuses.

## Education

B.S. Computer Science | University of South Florida | 2020
